

# How to take snapshot of a Microhost Server

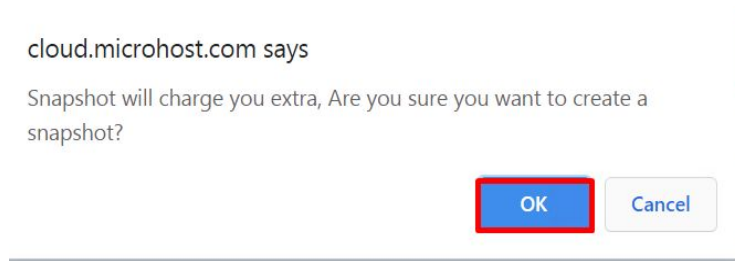

1. At first, You need to login to microhost account.
2. Select your server of which you want to take snapshot and click on manage cloud.

3. When you click on “Manage cloud” option , A window will appear shown in the image below. You need to select “snapshot” option and then click on “Take live snapshot”.

4. A pop-up will appear asking for extra charges for snapshot.

5. Click OK and snapshot will be created.
